Forgotten Books, United States, 2015. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book ***** Print on Demand *****.Excerpt from Composite Information Systems: A New Concept in Information Systems The Center for Information Systems Research (CISR) is a research center of the M.I.T. Sloan School of Management; it consists of a group of Management Information Systems specialists, including faculty members, full-time research staff, and student research assistants. The Center's general research thrust is to devise better means for designing, generating and maintaining application software, information systems and decision support systems. Within the context of the research effort sponsored by the Rome Air Development Center under contract F30602-77-C-0205, CISR proposed to investigate the development of a software programming environment for decision support systems using virtual machine technology as an integrating mechanism. Research issues to be studied include evaluating the potential utility of such a system for aiding Air Force SPO's in decision-making and formulating methods for providing automatic interfaces between virtual machines within this environment. In Technical Report No. 1, we studied various strategies for interfacing virtual machines. Technical Report No. 2 examines a specific decision support system in some detail, that makes use of some of the strategies for interfacing virtual machines. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy.
